

Assembly Instructions

Thank you for purchasing a Shelti product. All of us at Shelti want you to be completely satisfied with your Blue Line Air Powered Hockey game, so feel free to contact us for help with the assembly of your product, Shelti parts, or other information you may require.

Tools Required:

- 5mm Hex Wrench
- 14mm Wrench or Socket (For disassembly only)
- Phillips Head Screw Driver
- Level

Step #1

- Lift air hockey table out of the box and flip it upside down on a smooth surface.
- Remove the legs from the shipping board and locate the accessory package (may be located in one of the legs).

Step #2—Attach the Legs

Install the right and left legs using four carriage bolts per leg. Fasten the leg bolts using a washer and nut. Tighten until bolt heads are snug with the table surface. Over tightening could damage the side walls.

Step #3—Attach the Manual Scoring Units

Carefully flip the table over. Install the two scoring units using the phillips head bolts, score posts, score rods, and score beads. These scoring units should be assembled and installed in the pre-drilled holes located on the top rail.

Step #4—Level the Table

Level the air hockey game by placing a level across, lengthwise, and diagonally into the four corners and raise or lower the appropriate leg leveler.

Step #5—Plugging in the Blower Motor

The plug from the blower motor should be plugged into the power strip mounted on the underside of the table. The plug from the power strip should then be plugged into a standard 110/120 volt wall socket. Turn power on and off using the power switch located on the side of the table.

Step #6—Attach the Electronic Scoring Unit

Remove the three plastic caps located on the side of the table. Thread the two wires from the infrared sensors through the bigger hole. The AC adapter should plug in to the power strip attached to the bottom of the table. Thread the smaller end through the same hole as the other wires. Plug all three wires into the scoring unit as shown. If scored goals credit the wrong team, simply switch the two identical wires as they were plugged into the wrong position.

Line up the holes of the scoring unit with the smaller holes on the side rail. Fasten with a bolt in each hole with a Philips head screw driver.

Step #7—Operating the Scoring Unit

Turn the power switch to "on". Select desired game option. By default, it begins with the 15 minute game option. To change the game option, push the "select" button. There are seven total options including "Free play" which has no time limit or scoring limit. After choosing a game option, push the "Start" button to begin. To start over, press the "Reset / Start" button again. The volume switch has three settings: High, Low and Off.

Blue Line Hockey Disassembly Instructions

Two people are needed to disassemble the hockey table.

Step #1

Flip the table on it's side with the on/off switch facing upwards.

Step #2

Remove the twenty bolts from the top frame. There is a nut and a washer underneath each bolt. Use a crescent wrench to hold the nut underneath the top frame while unscrewing the bolts from the top with a 5 mm Allen wrench (provided).

Step #3

Remove the top rail frame from the cabinet. Taking apart the top frame is NOT recommended.

Step #4

Remove the four outer bolts from the playfield. They are the long, black topped bolts. To do so, use a 14 mm (0-9/16") socket wrench to hold the nut located on the bottom side of the center support beams under the table and a crescent wrench to unscrew the bolt top.

Step #5

Remove the playfield with the blower motor attached. Disassembling the blower motor from the playfield is NOT necessary.

Step #6

Lay the table flat on a smooth surface with the bottom facing upwards.

Step #7

Remove the two long center support beam bolts with a 5 mm Allen wrench (provided).

Step #8

Slide the white adaptor out of the zip ties, located on the inside of the center support brace.

Step #9

Carefully pull out the two center support beams out of the cabinet.

Step #10

The chords that are running from the goals to the side apron need to be detached from the side apron.

Step #11

Remove the eight screws from the inside of the side aprons with a Phillips screw driver (2 screws per corner).

Step #12

Slowly slide each end of the side apron up, out of the grooved corner molding at the same time.

Relocate all of the parts and put back together in reverse order. When placing the playfield back into the cabinet, be sure to place the white plastic curved puck guide inside the goal opening.
